DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Iida (5,922,500) in view of Titanium Kogyo (JP 2002-029730), Kawakami (5,814,429), and Kanbayashi (6,664,016). Iida teaches a toner where titanium moieties with similar intensity ratio, surface areas, and diameter are employed. Iida does not specifically teach the endothermic peak or combination of silica particles containing a titanium element. Titanium Kogyo teaches a toner with silica particles containing a titanium element used for a similar purpose of adjusting the charge property (page 11 of instant specification). Kawakami (col. 14 lines 38-44 and claims 1-2) and Kanbayashi (col. 10 lines 42-59) each teach similar toner compositions with the same endothermic peak under the same DSC conditions. It would have been obvious to one of ordinary skill in the art to combine the above teaching because of the direct suggestion of Titanium Kogyo to control charge properties with the combination of silica particles containing a titanium element and the well known endothermic peak of Kawakami and Kanbayashi because all the references are drawn to similar toner compositions and the components of the compositions are all used for their known and intended purpose in toner applications.
